MCD401 Current Midterm Paper 2022

Difference between transmitted and reflected light?

Answer: The major difference between transmitted and reflected lighting is that transmitted light passes through the entire subject's cross section, whereas reflected lighting penetrates only a short distance into a subject's Camera Basics, Principles and Techniques sub-surface. Many photographers assume the directional differences between transmitted and reflected light will not have any consequence on the appearance of a photograph. But, as I will show, it is just this difference in penetration depth that explains the effects produced in transmitted light photographs

MCD401 CURRENT PAPERS

What is tewer?

Write names of fundamental types of lenses in video camera?

What is kineoscope?

What is pioneer videography?
